

Action Items

- Joe and Anthony come up with runbook and low tech solution
- Nathan do some market analysis and funding options
- Stephen talk to drivers about being involved and helping with dry run

Construction Site

- **Find the Part(s)**
 - User searches lowes or home depot website for the local store and fills the cart with needed items
- **Confirm Order**
 - User views cart and validates items
- **Place Order**
 - User shares cart with our dispatching service
- **Track Order**
 - Basic tracking details (order received, job accepted, at store, in transit)
- **Confirm Receipt**
 - User received email with picture and a link to payment
- **Pay**
 - Comes to our payment system

Dispatcher

- **Receive Order**
 - Reply to sender with confirmation of receipt and spend (and delivery fee)
- **Categorize Order**
 - Capture order details (item numbers, store, aisles)
 - Classify Size of Item
 - Is it expensive? (high risk of theft?)
- **Find Agent**
 - Broadcast order to available agents

Delivery Agent

- **Receive Order**
 - Confirm job acceptance
- **Procure Item in store**
 - Manual selection of items
 - Check off as they go?
- **Pay for item**
 - Take picture of receipt
- **Deliver**
 - Take picture of delivery

Next

- Dry run a couple times

- Maybe intro some tech?
- A few of Stephen's friends with some incentive
- Intro more tech?

Some vNext Ideas:

- Basic web app
 - Order history
 - Order status page
 - Driver or dispatcher updates the status in dead-simple admin view
 - Automated texting of status from rather than from driver
 - Replenish funds
- Automate dispatcher
 - Broadcasting to delivery agents based on filters
- Automated cart parsing
 - Provide the delivery agent with highlighted item numbers, aisle numbers, store location and other key data
- Centralizing confirmation photos
- Phone app for
 - Construction company
 - Delivery agent

Questions

- Fee/price points
 - Variables
 - Distance calculator
 - Time spent in the store (number of items)
 - Truck vs Car vs Van
 - Demand/busyness
 - Time of day
 - Tips
 - Versions
 - Single fee
 - Radius + \$/mile
 - % fee of items purchased
 - Subscription
 - *Maybe all versions would get us \$100/delivery, but we might want to consider the most convincing way of selling it*
- What happens if an item in the cart is not available once in store?
 - Substitutions?
- How do we ensure that we have the right location of the store that is being selected for the cart?
- How does payment work?
 - Prepay bucket per month?
 - Venmo?
 - Who actually places the order? s
- Does the dispatcher select the agents or do agents volunteer?
- Communication Channels?
 - Text, Email, Slack?

- Order cancellation?
- When do we capture the delivery address and delivery instructions?
 - In particular if the item costs a lot of money
 - Maybe have a confirmation or qr code to ensure only the right person can receive the order
- Do some deliveries require a handoff rather than drop off? What if no one available?
